Chris Rosenau

AI Application & Full-Stack Developer

Dallas, Texas | 945-217-2211 | rosenauproductions@gmail.com | linkedin.com/in/christopherrosenau |
Portfolio: resume-rho-taupe.vercel.app

SUMMARY

I design, build, and run AI-enabled web applications end to end — spec, data model, tool-calling assistants, scheduled agents, deployment, and day-to-day operation — directing AI coding agents (Claude) as part of my engineering workflow.

Open to AI application developer, full-stack developer, and learning-technology developer roles.

SKILLS

Full-stack web: TypeScript / JavaScript, React, Next.js (App Router), Vite / PWA, HTML / CSS

Data & deployment: PostgreSQL (Neon), Drizzle ORM, REST API design, Supabase, Vercel (deploys, cron)

AI integration: LLM tool / function calling (Vercel AI SDK), Structured output with schemas (Zod), Scheduled autonomous agents (Claude), Prompt & guardrail design, Local LLMs (Ollama)

AI-directed engineering: Specs for AI coding agents, Code review & testing, Git-based releases, Production debugging & recovery

LMS & learning tech: Canvas admin + custom JS/CSS, AWS-hosted Rise, Articulate Rise / Storyline, Synthesia AI video

EXPERIENCE

Instructional Design Specialist (Media) — Medical Sales College — Feb 2024 – July 2026 · Remote

- Accelerated production with LLM workflows (Claude, ChatGPT, Grok) for scripting, iteration, and polish
- Owned Canvas LMS operations: troubleshooting, custom programming, and instructor support
- Led hybrid migration with Rise/Storyline modules plus Canvas administration and custom enhancements
- Produced remote-instructor and Vyond scenario video that simulated real patient cycles of care

Multimedia Director & LMS Platform Design — Higher Ed Partners — May 2022 – Dec 2023 · Dallas, Texas

- Shipped a JavaScript language-embed / translation layer in Canvas so learners could view Rise content in their preferred language
- Enabled remote Rise updates via AWS hosting inside Canvas — CSS for iframe UX and delivery without repeated master-course propagations
- Built Synthesia avatar-video templates that replaced slow traditional filming and scaled AI video across courses
- Mapped delivery workflows across Canvas, AWS, and media teams to tighten handoffs

Contractor — Instructional Designer — iCode School Franchise / Intuit — Dec 2021 – May 2022

- Built Storyline templates and multimedia web modules with interactive objects for LMS delivery
- Drove course development end to end with ADDIE — scope, timelines, and stakeholder alignment
- Partnered with SMEs on videos, graphics, CBT modules, and storyboards

Video Editor, Graphic Artist & E-Learning Designer — ProPricer — Jan 2001 – Dec 2021 · Bedford, Texas

- Owned media projects end to end for two decades — foundation for systems thinking and delivery discipline
- Shipped training video and interactive media for digital distribution

E-Learning Designer — Concordia University Irvine Feb 2016 – Oct 2020 · Irvine, California

- Assembled Storyline courses with Q&A, flow control, and assessment results
- Built animated course graphics and a 9-week series with custom character rigging

SELECTED SOFTWARE & AI PROJECTS

Resume Platform + Job Pipeline — Deployed · daily use · github.com/rosenauproductions/resume
My resume site and job tracker (Next.js 16, TypeScript, Neon Postgres + Drizzle, Vercel). Database-backed resume CMS with three audience views and an editor; job tracker with AI extraction of postings into structured fields; tool-calling assistants (visitor lead capture, a copilot that queues work for the email agent); web push with action buttons; visit tracking with Discord/ntfy/email alerts; nightly cron backups, restore and undelete.

Autonomous email & job-search agent — In production
Hourly scheduled Claude agent I designed and operate: reads new Gmail, sorts it by what matters (family, job search, Scouts, events), matches job mail to the tracker and updates status through the REST API with whole-record writes, opens job-posting links and rates fit, posts items to the copilot feed, sends one push per run, and drafts replies without ever sending. Guardrails for untrusted email content and a shared log for handoffs.

ID Assist — Instructional Design Compiler + Live Tutor — Deployed · id-assist.vercel.app
Local-first instructional-design compiler: brief → Bloom's-gated outline + cost → human approval → artifacts + live AI tutor grounded in the lesson. Adaptive SME interview, Ollama local mode, Electron desktop app. Solo-built architecture, prompt systems, and pedagogy rules.

FamilyFlow — Deployed · real families · www.ashurose.com
Family hub in use by real families: wall TV/tablet, phone, desktop and kid-desktop views over one Postgres data model (Next.js 16, React 19, Prisma, Auth.js with Google sign-in plus kid/adult codes, Vercel). Google Calendar sync, web push, device approval, printable charts with QR scan-back, a snap-grid layout editor, and built Android and Samsung TV apps. 386 commits in three months.

StepBot — Canvas LMS help bot — Deployed · github.com/rosenauproductions/StepBot-MSC
Embeddable Canvas help bot with multi-step guided answers, session memory, admin/creator tooling, and theming. Built for easy content management and multi-site deployment.

Null Arena — Working build · github.com/rosenauproductions
Original 3D racing & combat game (C++17/SDL2/OpenGL on Batocera Linux, 1–6 player split-screen, Wii-remote tilt steering). Directed two AI coding agents (cloud + desktop, Git-tracked): wrote the specs, reviewed every change from screenshots, ran beta/stable releases. Includes a phone-as-controller web companion and a three.js cockpit.

EDUCATION & CERTIFICATIONS

- **Graphic Arts** — Graphic Arts studies (1999 – 2000)
- Instructional Design Essentials: Models of ID
- E-Learning Professional Learning Path — In Progress
- Synthesia Video Essentials Certification
