Chris Rosenau

Visual & UI Design Specialist

Dallas, Texas | 945-217-2211 | rosenauproductions@gmail.com | linkedin.com/in/christopherrosenau |
Portfolio: resume-rho-taupe.vercel.app/?lens=ui

SUMMARY

I design and ship multi-device product interfaces — most recently FamilyFlow, a live family hub for wall, phone, and desktop — and judge visual work, including AI-assisted output, against a professional standard.

Open to product UI, visual design, and multimedia design roles.

SKILLS

Visual / UI Design: Layout & composition, Typography, Visual hierarchy, Design tokens & theming, Multi-device layout, Brand consistency

LMS & Delivery UX: Canvas administration, AWS-hosted Rise, CSS / iframe UX, Content delivery troubleshooting

Motion & video design: Premiere, After Effects, Vyond, PowerPoint animation, Synthesia

AI-assisted design: Claude / ChatGPT / Grok, Directing AI coding agents, Evaluating AI-assisted outputs, Spec-and-review workflow

Web & interactive: CSS / Tailwind, React / Next.js, Touch & keyboard UX, Print CSS, Canvas embedding, User flow

EXPERIENCE

Instructional Design Specialist (Media) — Medical Sales College — Feb 2024 – July 2026 · Remote

- Used Claude, ChatGPT, and Grok to accelerate scripting, iteration, and video polish while evaluating AI-assisted outputs for clarity, pacing, visual hierarchy, and fit to the learning brief
- Transformed Google Slides and PDFs into production-quality learning videos through graphic treatment and PowerPoint animation
- Led hybrid migration of instructor-led content into an accessible online format, with Canvas administration and custom enhancements
- Produced remote-instructor video and Vyond scenario content that simulated real patient cycles of care

Multimedia Director & Visual / UX Design — Higher Ed Partners — May 2022 – Dec 2023 · Dallas, Texas

- Authored CSS fixes for AWS-hosted Canvas content, resolving iframe rendering issues, content display problems, and learner UX friction across embedded course experiences
- Stood up Synthesia avatar-video templates that scaled visual production across courses
- Enabled remote Rise updates via AWS hosting inside Canvas, improving user flow without repeated master-course propagation
- Shipped a JavaScript translation layer in Canvas so learners could view content in their preferred language

Contractor — Instructional Designer — iCode School Franchise / Intuit — Dec 2021 – May 2022

- Built Storyline templates and multimedia web modules with interactive objects, attentive to layout and visual hierarchy for learner navigation
- Drove course development end to end with ADDIE — from scope and timelines through delivery
- Partnered with SMEs to produce videos, graphics, instructor manuals, CBT modules, and storyboards

Video Editor, Graphic Artist & E-Learning Designer — ProPricer Jan 2001 – Dec 2021 · Bedford, Texas

- Designed magazine ads, conference graphics, interactive media, and custom photo-shoot backgrounds with attention to layout, typography, visual hierarchy, and brand consistency
- Owned media projects end to end: storyboarding, effects, post-production, and final delivery formats
- Produced the EBS Texas PR announcement — script, drone/handheld film, narration, edit, and deployment

E-Learning Designer — Concordia University Irvine Feb 2016 – Oct 2020 · Irvine, California

- Built animated course graphics from scripts with narration and SRT subtitles (Vyond / After Effects), with close attention to visual pacing and typography
- Assembled Storyline courses with Q&A feedback, flow control, and assessment results
- Delivered a 9-week animated history series with custom character rigging and culturally resonant visual storytelling

SELECTED DESIGN & PRODUCT WORK

FamilyFlow — Deployed · real families · www.ashurose.com
Live family hub designed for every screen: a 16:9 wall TV or tablet, parent and kid phones, a keyboard-first desktop, and a kid's own computer. Touch-first with 48px targets and adjustable UI scale; a snap-grid layout editor; five color themes in light and dark; printable chore charts with QR scan-back; Olive, a mascot helper whose suggestions become one-tap actions. Designed and directed, built with AI coding agents.

Null Arena · github.com/rosenauproductions
Original Tron-inspired racing & combat game for a home console (Batocera Linux, C++17/SDL2/OpenGL), 1–6 player split-screen with Wii-remote tilt steering. Directed two AI coding agents (cloud + desktop, Git-tracked) to build it — wrote the specs, reviewed every visual change from screenshots, and ran separate beta/stable releases. Built a five-level story campaign, a phone-as-controller web companion, and a 3D cockpit (three.js) with lock-on targeting, plus the full 3D asset pipeline, textures, interface art, and audio.

Resume site + Pipeline · github.com/rosenauproductions/resume
My resume site and job tracker: Next.js/TypeScript with Media/AI/UI lenses, Neon-backed job pipeline, visit tracking, visitor identify/link, JD ingest, and an on-site AI chat via Vercel AI Gateway.

Pistomp-Mobile · github.com/rosenauproductions/Pistomp-Mobile
Mobile-first TypeScript + Vite PWA for the open-source Pi-Stomp multi-effects platform — pedalboard control, A/B snapshots, and per-effect params over the MOD-UI API, designed for phone use on the Pi's Wi-Fi hotspot.

Party games — Family Feud & The 1% Club · github.com/rosenauproductions/family-feud
Browser party games with projector/TV display, host controller, and phone contestant clients — real-time multi-device UI.
